

Tutorial 2

Activity 1: Link and Style Donation Page

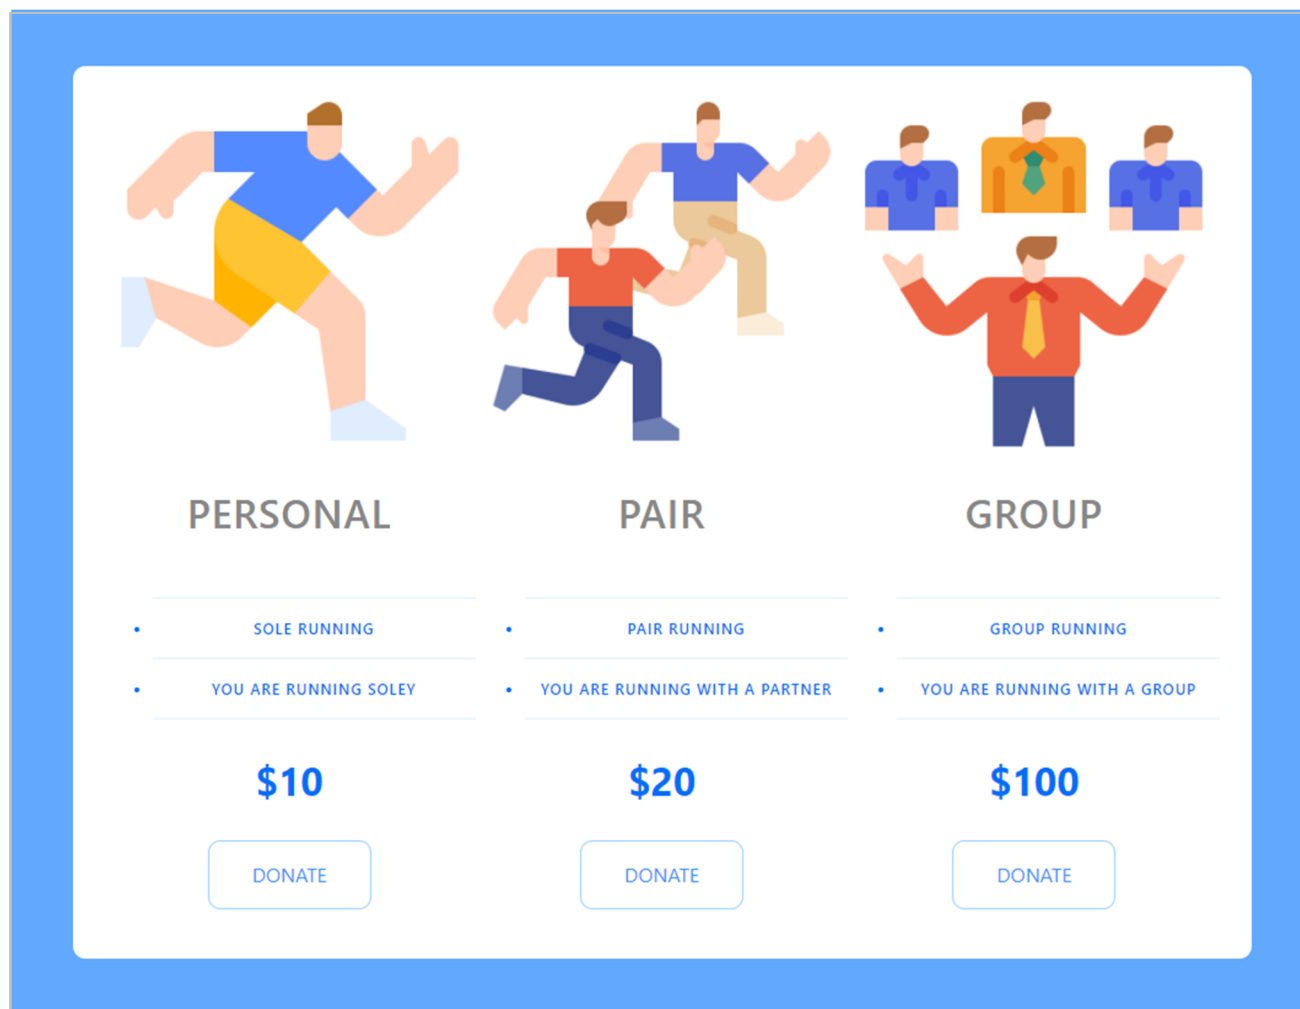

Please download the **Provisions** zip file from MyLO. You will need to modify the `style.css` file and create a link to it in the `donation.html` file. Once you define the CSS rules and complete the link, you will see the styles are applied in `donation.html`.

- `style.css`: You will find instructions in this file. Using the instructions as a guide, define appropriate CSS rules (please do not delete the instructions).
- `donation.html`: You will need to refer to the CSS file above in `donation.html` for you styles to be applied. Do not modify any HTML in the `<body>` section of `donation.html`. You only need to add code in the `<head>` section.

By default, there is no style applied in `donation.html` and you will see that it is displayed as below.

Complete `style.css` so that `donation.html` closely resembles the following.

Activity 2: Style the Marathon site pages

Following the same process as Activity 1, create and apply CSS styles to the pages you created last week as part of Tutorial 1.

- 1) Add a link to your CSS file in `index.html`.
- 2) Define appropriate CSS rules to style the elements within `index.html`. You will likely need to add attributes to HTML elements and/or define new elements to facilitate styling.
- 3) Once you have styled `index.html`, follow the same process to style `registration.html`.
- 4) For this tutorial, recreate the menu in each page and ensure the links work as expected.
- 5) Consider how you can share rules between pages, especially for the menu. You may wish to incorporate CSS comments to help organise your CSS rules and/or come up with your own naming convention for id/class values.

The below screenshots (next page) show the expected result. Your output may differ slightly but should look as similar as possible to the screenshots.

Index.html

Why Do We Run?

Run marathon for children living in poverty. Children living in poverty face barriers to accessing an education. Increasing access to education can improve the overall health and longevity of a society and growing economies. Yet in many developing countries, children's access to education can be limited by numerous factors. Therefore, we run to raise the fund for kids who need a support for their education.

Submission

Show your CSS rules to your tutor in your registered tutorial in **week 4** and be ready to answer any questions on your approach. Tutors will expect to see and mark your work at the **beginning of the tutorial**, so please come prepared so that the marking process can be completed as efficiently as possible.
